In general, the higher the standard deviation, the greater the volatility of return. **Sharpe Ratio** is calculated using the annualized total return, the annualized risk-free rate (i.e. Barclays Short Treasury 1-3 Mon TR) and the annualized standard deviation since inception. The Sharpe Ratio is a measure of risk-adjusted returns.

What are Some of the Risks of the Fund?

AN INVESTMENT IN THE FUND IS SUBJECT TO A HIGH DEGREE OF RISK. THESE RISKS INCLUDE, BUT ARE NOT LIMITED TO, THOSE OUTLINED BELOW.

Real Assets entails special risks, including tenant default, environmental problems, and adverse changes in local economies.

The Fund is "non-diversified" under the Investment Company Act of 1940. Changes in the market value of a single holding may cause greater fluctuation in the Fund's net asset value than in a "diversified" fund. The Fund is not intended as a complete investment program but instead as a way to help investors diversify into real assets. Diversification does not ensure a profit or guarantee against a loss.

A multi-manager strategy involves certain risks. For example, it is possible that some Investment Managers may take similar market positions, thereby interfering with the Fund's investment goal. The Fund and underlying Investment Managers may borrow as an investment strategy, up to one third of the Fund's gross asset value. Borrowing presents opportunities to increase the Fund's return, but potentially increases the losses as well.

The Adviser and Investment Managers manage portfolios for themselves and other clients. A conflict of interest between Fund and these other parties may arise which could disadvantage the Fund. For example, a suitable but limited investment opportunity might be allocated to another client rather than to the Fund.

The Fund does not intend to list its Shares on any securities exchange during the offering period, and a secondary market in the Shares is not expected to develop. There is no guarantee that shareholders will be able to sell all of their tendered shares during a quarterly repurchase offer. An investment is not suitable for investors that require liquidity, other through the Fund's repurchase policy.

You should not expect to be able to sell your Shares other than through the Fund's repurchase policy, regardless of how the Fund performs.
